PROFESSIONAL SUMMARY

Data Analyst with 3 years of experience delivering actionable insights across energy, telecommunications, and healthcare sectors. Skilled in SQL, Power BI, Python, and cloud data platforms (Azure, AWS, Snowflake); proven track record of building dashboards, ETL pipelines, and forecasting models that drive measurable business outcomes. Master of Data Analytics, RMIT University.

CORE COMPETENCIES

SQL & Databases	Advanced SQL/T-SQL, stored procedures & views, Snowflake, Redshift, SSMS, PostgreSQL, relational databases
BI & Visualisation	Power BI Desktop & Service (DAX, Power Query/M, RLS, workspaces, Report Builder paginated reports), PowerPoint, Power Platform (Power Automate, Power Apps), Tableau, QuickSight, Excel — dashboards, workflow automation & self-service reports; Qlik (exposure via internal reporting/ticketing systems)
Data Pipelines & ETL	ETL/ELT design, Alteryx, Azure Data Factory, Databricks, data warehousing
Analytics & Languages	Python, R, SAS, A/B testing, statistical analysis, data validation & governance
Process & Documentation	BRD, FRD, User Stories, Data Mapping Documents, Microsoft Visio (process/data flow diagrams), Agile/Scrum ceremonies
Cloud & Collaboration	Azure (Data Factory, Synapse Analytics, SQL Database, Blob/Data Lake) — hands-on; AWS, GCP (familiar); Git, cross-functional stakeholder communication

WORK EXPERIENCE

Multimodal Data Annotation Contractor (Freelance — Upwork) — Gridware

Remote | Apr 2026 – Jun 2026

- Annotated and labeled multimodal (image and video) datasets as a freelance contractor for Gridware via Upwork, following client-specified guidelines and internal tooling to support ML training data quality.
- Applied close attention to detail and consistent judgment across repetitive, high-volume annotation tasks, adhering to project style guides and quality standards.

Operational Analyst — AGL Pty Ltd

Melbourne, Australia | Mar 2024 – Mar 2026

- Wrote complex SQL queries, stored procedures, and views to extract and analyse data from relational databases supporting sales fulfilment and pricing operations — reducing pipeline turnaround time by 30%.
- Built and maintained 8+ interactive Power BI dashboards, designing dimensional data models (fact/dimension tables, star schema) with DAX measures and calculated columns for KPI logic, and embedded data validation, achieving 100% pricing accuracy across all customer segments.
- Performed data validation, cleansing, and transformation across retail and commercial datasets; diagnosed integration issues via SQL-based profiling, improving data reliability by 25%.
- Worked extensively within the Azure ecosystem — orchestrating ETL pipelines in Azure Data Factory, querying and managing data in Azure SQL Database, running analytics workloads in Azure Synapse Analytics, and storing raw and curated datasets in Azure Blob Storage / Data Lake — to support the pricing and reporting pipelines above.
- Developed paginated operational reports in Power BI Report Builder alongside interactive dashboards, delivering print- and distribution-ready reporting formats for business teams.
- Published and managed Power BI reports in the Power BI Service — administering workspaces, configuring scheduled data refreshes, and managing gateway connections so dashboards stayed current for business users.
- Performed data cleaning, transformation, and shaping using Power Query (M) to prepare source data for Power BI reporting models.
- Implemented row-level security (RLS) and access controls in Power BI to govern visibility of sensitive data by user role.
- Collaborated with data engineers and cross-functional teams (Sales, Finance, Technical) to document business requirements and data

definitions, driving a 20% increase in operational efficiency.

- Participated in Agile/Scrum ceremonies (sprint planning, backlog grooming, retrospectives) as part of a cross-functional delivery team, authoring User Stories, Functional Requirement Documents (FRDs), and Data Mapping Documents alongside BRDs to support solution delivery.
- Created process flow and data flow diagrams in Microsoft Visio to support knowledge transfer across distributed teams.

Workforce Analyst — Probe Group (CX)

Melbourne, Australia | Jan 2023 – Jan 2024

- Designed and managed Python and SQL data pipelines supporting time-series forecasting models — achieving 85–90% forecast accuracy and improving resource utilisation by 15%.
- Automated data extraction, cleansing, and transformation pipelines, reducing manual reporting effort by ~20% and ensuring data accuracy for daily decision-making.
- Developed KPI dashboards with automated validation checks and presented findings to technical and non-technical stakeholders.
- Built Power Automate workflows to automate approval, notification, and data-refresh processes supporting KPI dashboard and forecasting reporting — reducing manual coordination effort.
- Built Alteryx workflows to blend and prepare data feeds from multiple source systems into the reporting layer, supplying cleansed datasets to KPI and forecasting dashboards on a regular operational cadence.
- Identified data quality bottlenecks and implemented 3+ process improvements that enhanced contact-centre performance by 10%.

Data Analyst Intern — Stride Mental Health (Healthcare)

Brisbane, Australia | Mar 2021 – Aug 2021

- Built an end-to-end Python and SQL data pipeline on ~500 healthcare participant records covering ingestion, cleansing, validation, and transformation — improving health-service delivery insights by 15% and reducing manual data preparation time.
- Designed an interactive Power BI workforce-forecasting dashboard with real-time performance visibility for clinical teams and management, increasing resource allocation accuracy by 15%.
- Conducted exploratory data analysis and statistical profiling on participant outcome data; documented data definitions and pipeline logic to support ongoing use by non-technical clinical staff.

PROJECTS

India Air Quality Forecasting | github.com/PaddyCH96/india-aqi-forecasting

Python · Jupyter Notebooks · NumPy · SciPy · XGBoost · Random Forest · FastAPI · PostgreSQL · Docker · Streamlit

- Engineered a production-grade ML forecasting system on 700K+ air quality records across 26 Indian cities and 12 pollutants (5.5 years of CPCB + OpenAQ data), achieving 0.8–1.0% MAPE for Bengaluru, Hyderabad, Chennai, and Delhi — outperforming moving-average baselines by 10–20×.
- Designed a 66-feature engineering pipeline per city (lag features, rolling statistics, seasonal cycles, pollutant interaction terms) using NumPy and SciPy for numerical computation, developed and validated in Jupyter Notebooks, with time-series cross-validation and full data provenance tracking.
- Built a 6-page interactive Streamlit analytics dashboard and a FastAPI REST service with `/forecast/{city}`, `/validate/{city}`, and `/data/freshness` endpoints.
- Deployed via Docker Compose (4 services: PostgreSQL, data seed, dashboard, API); 144 automated tests across 9 files at 95% coverage; Ruff-compliant codebase.

Customer Churn & Revenue Risk Analysis — Telco | github.com/PaddyCH96/customer-churn-analysis-telco

Python · Jupyter Notebooks · Pandas · statsmodels · Statistical Analysis · Segmentation · HTML Report

- Analysed 7,043 telecom customers in Jupyter Notebooks using Python, Pandas, and statsmodels to quantify churn drivers and revenue risk: identified \$139K/month at risk, with month-to-month contract customers churning at 42.7% and first-6-month cohorts at 54.3%.
- Conducted multi-dimensional segmentation across contract type, tenure, payment method, and service bundle — finding that customers with both Tech Support and Online Security churn at only 9.0% vs. the 26.5% overall rate.
- Translated statistical findings into a prioritised retention strategy: contract conversion programme, onboarding improvement for early-tenure customers, auto-pay adoption push, and bundled support upsell.
- Delivered a self-contained HTML executive report with KPI summary, risk segmentation tables, and actionable recommendations formatted for non-technical leadership audiences.

EDUCATION

Master of Data Analytics — RMIT University, Melbourne

Specialisation: Advanced Analytics (SAS) | 2022

Bachelor of Electronics & Communication Engineering — Vasavi College of Engineering, Hyderabad

2018

CERTIFICATIONS

IELTS — Overall Band 8.0 · SQL (Advanced) · Data Analysis Fundamentals · RMIT–SAS Advanced Analytics
